# DEER SCRAM<sup>™</sup> PROFESSIONAL

**Deer Scram Professional** stimulates a strong fear-based response that scares deer away by emitting an odor they associate with death. It repels them before they begin browsing shrubs and eating plants & flowers.

### COVERAGE

25lb Container will provide approximately 1440 linear feet of protective strips (protecting approx. up to a maximum of 27,900 square feet based on 18-inch strips).

### ● Assess and Quote

- Measure perimeters of the landscaped areas
- Locate where deer are entering property.
- Calculate total linear feet of application.

### ● Scoop

Use the scoop provided. One scoop will provide approximately 20 linear feet on an 18-inch wide strip.

### ● Treat

- Starting 15 inches from the edge of the landscaped area, apply a 20-inch wide band of Deer Scram Professional around the perimeter of the bed.
- Find where the deer are entering the property and apply (3) three 18-inch strips across the deer path, 5 feet apart.

Each application of Deer Scram Professional should last 30 days, including normal rainfall or irrigation. Extremely heavy rain may require re-application.

### Focus on Peak Application Times

Deer are active all year long in all zones - particularly active during early spring/summer, and in dry zones where irrigation is used. Apply as a preventative to protect spring sprouts and seedlings, especially tulips before bloom. For fall, protect mums, squashes & pumpkins.

In winter, deer diets change to evergreen & ornamental shrubs. Apply before, & then on top of, snow cover. Specific winter applications are available for heavy snowfall regions.
