

DEER SCRAM PROFESSIONAL™

APPLICATION INSTRUCTIONS

DEER SCRAM PROFESSIONAL™ stimulates a strong fear-based response that scares deer away by emitting an odor they associate with death. It repels them before they begin browsing shrubs and eating plants & flowers.

ASSESS AND QUOTE:

- Measure perimeters of the landscaped areas
- Locate where deer are entering property
- Calculate total linear feet of application

COVERAGE: 25lb Container will provide approximately 1440 linear feet of protective strips (protecting approx. up to a maximum of 27,900 square feet based on 18-inch strips).

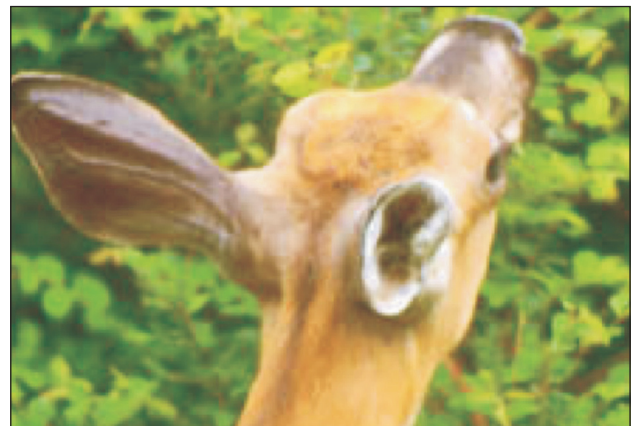

APPLY: Starting 15 inches from the edge of the landscaped area, apply a 20-inch wide band of Deer Scram Professional around the perimeter of the bed. Find where the deer are entering the property and apply (3) three 18-inch strips across the deer path, 5 feet apart.

Each application of Deer Scram Professional should last 30 days, including normal rainfall or irrigation. Extremely heavy rain may require re-application.

PEAK APPLICATION TIMES: Deer are active all year long in all zones - particularly active during early spring/summer, and in dry zones where irrigation is used. Apply as a preventative to protect spring sprouts and seedlings, especially tulips before bloom. For fall, protect mums, squashes & pumpkins.

In winter, deer diets change to evergreen and ornamental shrubs. Apply before, and then on top of, snow cover. Specific winter applications are available for heavy snowfall regions.

Do not contaminate water, food or feed by storage or disposal. Do not apply directly to water.
